Mobile Time and Attendance achieves National Footprint

AUSTIN, Texas – April 13, 2006 – Legiant, a leading workforce management solutions provider, today announced the integrated offering of its industry-leading time and attendance system, Legiant Timecard, and wireless pioneer AirLink Communications' Raven Ethernet (Raven-E) modem, making it possible for businesses to collect employee time and attendance information from virtually anywhere.

By employing AirLink's Raven-E to provide access to Legiant Timecard's automated time accounting and real-time labor reporting system, Legiant has enabled customers to deploy its workforce solution without adding expensive T1 or other hard-wired data lines. Additionally, the Raven-E eliminates system downtime and provides truly mobile broadband performance, with typical data speeds similar to DSL.

The integrated offering of Legiant Timecard and AirLink's Raven-E modem enabled Verion Staffing, a staffing and training firm specializing in the semiconductor, electronics, sheet metal and telecommunications industries, to easily deploy and run the Legiant Timecard system without undertaking additional cost to supplement Verion's already stretched land-line capacity. "We are continually trying to add value to our offerings," said Gina Ross, President of Legiant. "Our clients are already experiencing the benefits of mobile access and pervasive connectivity when including AirLink's wireless modems with our workforce management solutions."

Cellular service and a web browser are the only requirements to connect to the full functionality of all of the Legiant Timecard devices, including PCs or other data collection systems like Biometric, Bar Code and Touch Screen terminals. Legiant's wireless platform is the first to achieve a national footprint by partnering with major cellular carriers, including Sprint, Verizon and Cingular.

Legiant customers utilizing wireless connectivity can now communicate with mobile employees or remote locations with the convenience and reliability of perpetual connectivity offered by AirLink's Raven-E, which is used as an invaluable backup for wired networked systems. GetWireless, a Minneapolis communications company offering the integrated Legiant and AirLink solution, realized an immediate ROI from using the Raven-E modem as a backup when its own wireless network shut down over a three-day period. "When we lost our internet connection, I plugged the

Raven-E modem into our internal router, changed some settings, and was able to immediately regain internet connectivity," remarked Bryan Rasmussen, CIO of GetWireless.

The Raven-E modem is powered by the AirLink Embedded Operating System (ALEOS) -- the longstanding industry benchmark for reliable and feature-rich embedded intelligence. With extensive capabilities like remote monitoring and configuration, packet-diagnostics and over-the-air firmware updates, ALEOS technology allows for seamless installation, communication and maintenance of the Legiant Timecard.

Legiant has arrived at the next generation of mobile employee management by providing the "always-on" and "always-aware" connection required for today's mission-critical time and attendance applications.

About AirLink Communications, Inc

Founded in 1993, delivers wireless data solutions that enable pervasive connectivity to fixed and mobile assets. The company's continued industry leadership is based on its reputation for making complex wireless data solutions work. AirLink proactively designs and commercializes products based on a clear understanding of evolving customer needs. The company maintains strong working relationships with carriers, dealers and solutions providers. Its devices are broadly certified on all major wireless networks in North America. Airlink's multi-tiered product suite includes both hardware and comprehensive software.

About Legiant

Legiant is a privately held company based in Austin, Texas that delivers innovative "zero footprint" time and attendance solutions. Legiant Timecard manages hourly, salaried and exempt time with features including: employee self-service, workflow, leave requests, automated e-mail notifications, active directory and XML integration. Legiant workforce management software is your answer to complete, easy labor management and employee self-service. Legiant can be contacted via the web at <http://www.legiant.com>
